

Example of creating a layout using two sets of size classes

GitHub repository: https://github.com/LCC-CIT/CS235IM-Demos/tree/master/VocabQuiz_SizeClasses

Landscape Orientation

The top label, "Question" is the anchor for the other controls

The X constraint centers it horizontally on the screen

The Y constraint sets it a fixed distance above the center of the screen

The constraints shown above are the ones used in just the landscape size classes

These constraints use size classes `wChC` and `wRhC`. This corresponds to landscape orientation on all sizes of iPhones
